

Homework 1

Before starting, read through [Individuals versus Networks](#) by James Cook. This will help you to finish the assignment.

1. Define a set of people who you consider to be your "family."
2. Describe your family using an individual-level approach (e.g., # of adults and children, locations, etc.). The easiest way to do this is probably as a table. E.g., the start of the table of my family might look like this. Be creative in the variables that you measure. :)

Name	Age	Gender	Hair color
Rebecca	11	F	Blond
William	9	M	Brown
Owen	6	M	Blond

3. Describe your family in each of the following ways:
 - drawing a social network graph
 - writing out a social network edge list
 - creating a social network matrix
4. Turn in your assignment on BrightSpace.
